Of Ohio

Dear Members of the Board:

Governmental Accounting Standards Board Statements No. 43 and 45 require actuarial valuations of retiree medical and other post-employment benefit plans. We have submitted the results of the annual actuarial valuation of the Retiree Health Care Valuation of the School Employees Retirement System of Ohio (SERS) prepared as of June 30, 2014. While not verifying the data at source, the actuary performed tests for consistency and reasonability. The valuation indicates that the Annual Required Contribution (ARC) required by GASB Statement 45 is 5.77% of active payroll payable for the fiscal year ending June 30, 2015. Any net claims or premiums paid for retiree health care are considered contributions toward the ARC. Your attention is directed particularly to the summary of results on page 1 and the comments on page 6.

The medical and drug benefits of the Plan are included in the actuarially calculated contribution rates which are developed using the entry age normal cost method with the normal cost rate determined as a level percentage of payroll. GASB requires the discount rate used to value a plan be based on the likely return of the assets held in trust to pay benefits. The discount rate used in this valuation is 5.25%. Gains and losses are reflected in the unfunded accrued liability that is amortized by regular annual contributions as a level percentage of payroll within a 30-year period, on the assumption that payroll will increase by 4.00% annually. The assumptions recommended by the actuary are, in the aggregate, reasonably related to the experience under the Plan and to reasonable expectations of anticipated experience under the Plan and meet the parameters for the disclosures under GASB 43 and 45.

The impact of the Affordable Care Act (ACA) was addressed in this valuation. Review of the information currently available did not identify any specific provisions of the ACA that are anticipated to significantly impact results. While the impact of certain provisions such as the excise tax on high-value health insurance plans beginning in 2018 (if applicable), mandated benefits and participation changes due to the individual mandate should be recognized in the determination of liabilities, overall future plan costs and the resulting liabilities are driven by amounts employers and retirees can afford (i.e., trend). The trend assumption forecasts the anticipated increase to initial per capita costs, taking into account health care cost inflation, increases in benefit utilization, plan changes, government-mandated benefits, and technological advances. Given the uncertainty regarding the ACA's implementation (e.g., the impact of excise tax on high-value health insurance plans, changes in participation resulting from the implementation of state-based health insurance exchanges), continued monitoring of the ACA's impact on the Plan's liability will be required.

To the best of our knowledge, this report is complete and accurate. The valuation was performed by, and under the supervision of, independent actuaries who are members of the American Academy of Actuaries with experience in performing valuations for public retirement systems. The undersigned are members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

The valuation was prepared in accordance with the principles of practice prescribed by the Actuarial Standards Board.

Future actuarial results may differ significantly from the current results presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Since the potential impact of such factors is outside the scope of a normal annual actuarial valuation, an analysis of the range of results is not presented herein.

The actuarial calculations were performed by qualified actuaries according to generally accepted actuarial procedures and methods. The calculations are based on the current provisions of the system, and on actuarial assumptions that are, in the aggregate, internally consistent and reasonably based on the actual experience of the system.

SECTION IV - COMMENTS ON VALUATION

Schedule A of this report contains the valuation balance sheet which shows the present and prospective assets and liabilities of the System as of June 30, 2014.

1. The total valuation balance sheet on account of health care shows that the System has total prospective health care liabilities of \$3,340,402,966, of which \$952,544,998 is for the prospective benefits payable on account of present retired members and beneficiaries of deceased members, \$15,658,777 is for the prospective benefits payable to current deferred vested members, and \$2,372,199,191 is for the prospective benefits payable on account of present active members. Against these health care liabilities the System has a total market value of assets of \$413,858,201 as of June 30, 2014. The difference of \$2,926,544,765 between the total liabilities and the total present actuarial value of assets represents the present value of contributions to be made in the future on account of health care. Of this amount, \$0 is the present value of future contributions expected to be made by members, and the balance of \$2,926,544,765 represents the present value of future contributions payable by SERS.
2. SERS' contributions on account of health care consists of normal contributions and accrued liability contributions. The valuation indicates that employer normal contributions at the rate of 2.82% of payroll are required to provide the benefits of the System for the average new member of SERS.
3. Prospective employer normal contributions on account of health care at the above rates have a present value of \$864,793,714. When this amount is subtracted from \$2,926,544,765, which is the present value of the total future contributions to be made by the employer, there remains \$2,061,751,051 as the amount of future accrued liability contributions.
4. It is recommended that the accrued liability contribution rate payable by SERS on account of health care be set at 2.95% of payroll. This rate is sufficient to liquidate the unfunded accrued liability of \$2,061,751,051 over 30 years on the assumption that the aggregate payroll for members will increase by 4.00% each year.

SECTION V – DERIVATION OF EXPERIENCE GAINS AND LOSSES

Actual experience will never (except by coincidence) coincide exactly with assumed experience. It is assumed that gains and losses will be in balance over a period of years, but sizable year to year fluctuations are common. The following chart shows the projected Health Care Fund Balances from the five most recent valuations. The prior year projections are based on assumptions as of the prior year valuation dates. Starting with the June 30, 2011 valuation, the projections are based on a 7.75% future asset rate of return assumption and assumed health care contribution rates based on the pension valuation and the surcharge calculation.

SCHEDULE B

STATEMENT OF ACTUARIAL ASSUMPTIONS AND METHODS

The decremental assumptions used in the valuation were adopted by the Board in April, 2011.

INTEREST RATE: 5.25% per annum, compounded annually (net after all System expenses).

DEATH AFTER RETIREMENT: The mortality table, for post-retirement mortality, used in evaluating allowances to be paid is the 1994 Group Annuity Mortality Table, set back one year for both men and women. Special tables are used for the period after disability retirement. This assumption is used to measure the probabilities of each benefit payment being made after retirement. There is sufficient margin in the current mortality tables for possible future improvement in mortality rates and that margin will be reviewed again when the next experience investigation is conducted.

VALUATION METHOD: Entry age normal cost method. Entry age is established on an individual basis.

ASSET VALUATION METHOD: Market value.

AultCare and PrimeTime Pharmacy

Members enrolled in the AultCare PPO plan (members without Medicare and members with Medicare Part B only) and members enrolled in the PrimeTime Health Plan (members with both Medicare Part A and Medicare Part B), may receive up to a 30-day supply per retail prescription. The co-pay is \$5 for generic, 25% of formulary (\$25 minimum and \$100 maximum) for preferred brand and 100% for a non-preferred brand prescription (50% if enrolled in a Medicare plan). Members may also receive a 90-day supply of their prescriptions via mail-order with a co-pay of \$12 for generic, 25% of formulary (minimum \$45 and maximum \$200) for preferred brand, and 100% of the cost for a non-preferred brand prescription (50% if enrolled in a Medicare plan).

Members pay special co-payments for insulin prescriptions. Members pay \$30 for preferred brand, and \$45 for a non-preferred brand retail 30-day supply prescription. Mail-order copayments are \$60 for preferred brand, and \$115 for a non-preferred brand 90-day supply prescription.

HealthSpan Pharmacy

Members enrolled in the HealthSpan (members without Medicare) plan may receive up to a 31-day supply per retail prescription with a co-pay of \$10. Members may also receive a 62-day supply of their prescriptions via mail-order with a co-pay of \$25.

Members enrolled in HealthSpan plan (members with both Medicare Part A and Medicare Part B and members with Medicare Part B only) may receive up to a 31-day supply per retail prescription. The co-pay is \$15 for generic and \$30 for preferred brand prescriptions. Members may also receive a 62-day supply of their prescriptions via mail-order with a co-pay of \$15 for generic and a co-pay of \$30 for preferred brand prescriptions.

Medicare Part D Prescription Drugs

SERS' health plan participants enrolled in a Medicare plan are automatically covered under a Medicare Part D prescription drug plan through SERS and should not enroll in a separate Medicare Part D plan. Enrolling in another Part D plan would cause cancellation of SERS coverage for both medical and prescription drug benefits per federal law.

GLOSSARY

Actuarial Accrued Liability. The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as "accrued liability" or "past service liability".

Accrued Service. The service credited under the plan which was rendered before the date of the actuarial valuation.

Actuarial Assumptions. Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method. A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future plan benefits" between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the "actuarial funding method".

Actuarial Equivalent. A series of payments is called an actuarial equivalent of another series of payments if the two series have the same actuarial present value.

Actuarial Present Value. The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

Age-Related Morbidity. Assumed increase to the net incurred claims related to increase in age.

Amortization. Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

Experience Gain (Loss). A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

Health Care Cost Trend Rates. The annual assumed rate of increase for both claims and contributions.

Normal Cost. The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as "current service cost". Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

Plan Termination Liability. The actuarial present value of future plan benefits based on the assumption that there will be no further accruals for future service and salary. The termination liability will generally be less than the liabilities computed on a "going concern" basis and is not normally determined in a routine actuarial valuation.

Reserve Account. An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

Unfunded Actuarial Accrued Liability. The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as "unfunded accrued liability".

Valuation Assets. The value of current plan assets recognized for valuation purposes. Generally based on book value plus a portion of unrealized appreciation or depreciation.
